DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Watt et al. 3980074.

3. Watt et al. teaches a receptacle comprising: a receptacle body that defines an enclosed cavity containing powdered medicament (col. 2, lines 27-28), wherein the receptacle body has a top end and a bottom end, and wherein the bottom end of the receptacle body includes a raised central region that extends upwardly into the cavity; wherein the receptacle body further comprises at least one curved wall that in combination with the raised central region forms a generally semi-toroidal geometry in the cavity; wherein a portion of the bottom end is flat in geometry; and wherein the receptacle body further includes a tab extending from the cavity (see figures).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3761

5. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Watt et al. in view of Nobbio 5845814.

6. Watt et al. teaches a receptacle as in claim 1, further comprising a central hole in the top end and multiple vents. Watt et al. fails to teach a cover removable attached to the top end to cover the hole and the vents.

7. Nobbio teaches a receptacle with a common cover 6. Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to include the cover of Nobbio to prevent any loss of medicament though the hole and/or vents on the receptacle.

Allowable Subject Matter

8. Claims 13-22 and 31-34 are allowable over the prior art of record.

Art Unit: 3761

9. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to teach or render obvious the overall claimed method for aerosolizing a powdered medicament, the method comprising: providing a receptacle comprising a receptacle body that defines an enclosed cavity, wherein the receptacle body has a top end and a bottom end, wherein the bottom end of the receptacle body includes a raised central region that extends upwardly into the cavity; and inserting a bottom end of an extraction tube into the cavity such that the bottom end of the extraction tube is aligned with the raised central region and is spaced above the bottom end of the receptacle.
